

Exzenter Jaw Crusher

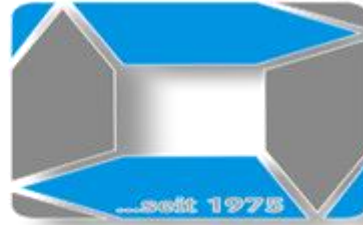

Eccentric jaw crushers from Niedernhuber are used for crushing concrete or heavy concrete, granite, building rubble sandstones and paving stones. The stones should not exceed a maximum size of 200 x 200 x 200mm.

The crusher material is scooped in with a manual tool or delivered to the crusher via a hopper with a digger or mini-wheel loader.

The crushed material can be sucked off, drained into a container or transported away with a screw.

Due to its compact design, the jaw crusher can be easily transported and is therefore flexible in use.

Advantages at a glance

- ✓ line Stark
- ✓ Compact design, easy to transport approx.
- ✓ V-belt drive with 22 kW electric motor
- ✓ Pipe connections freely selectable
- ✓ Extremely wear-resistant body
- ✓ grain size adjustable
- ✓ Transmittance about 3 m³ / h
- ✓ Rangiergestell and eyebolts
- ✓ Painting according to RAL freely selectable
